# Docx: Intelligent Digitization of Healthcare Records

An automation tool leveraging image processing and machine learning technologies to extract, process, and integrate data from physical forms into various enterprise systems (EHR, CRM). The solution can help healthcare organizations improve accuracy in data collection while reducing staffing needs for clerical tasks.

Solution Features

- Intelligent data extraction by leveraging AWS Textract ML service
- Customized business rules and validations to improve accuracy
- Configurable workflows with Audit trails to process any kind of static document
- Seamless and rapid integrations with CRMs, EHRs, EMRs, LIMS

~50%
Reduction in Physical Form Processing
